

BIOPAQ®IC

Anaerobic industrial effluent treatment

With anaerobic effluent treatment almost every industry can decrease (production) costs and meet tighter discharge limits.

Hi, I'm Andy. I generate your Bio energy!

The BIOPAC®IC reactor was developed by Paques, in cooperation with universities, research institutes and customers. Fundamental and applied research into biological, physical and mechanical aspects of the system resulted in a wide range of IC's, which enables Paques to provide every customer with a tailor made wastewater treatment system that meets all the client's requirements.

About BIOPAQ®IC

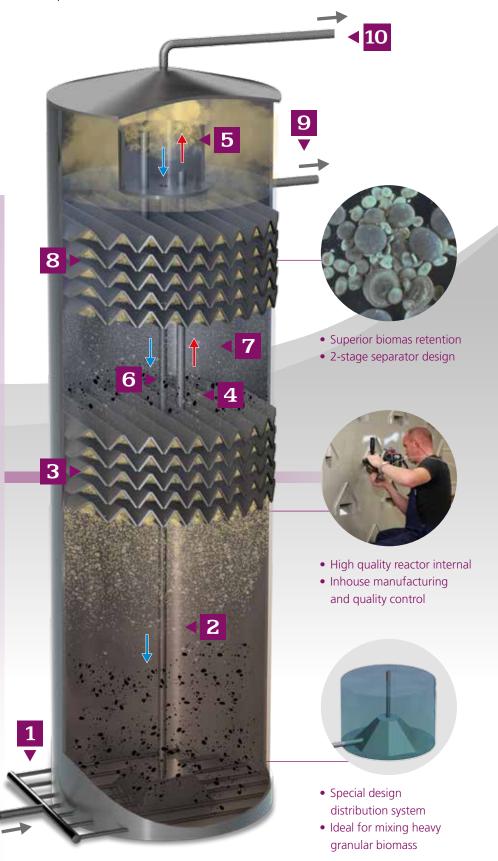

- Proven technology,
- > 25 years operational experience
- 1050 BIOPAQ® references worldwide
- Continuous innovation
- Available for all kinds of industries
- Small footprint, also applicable in urban area
- Production of 'green' energy-rich biogas
- A complete range of standardised concepts
- Tailor made solutions (indoor/outdoor)
- Worldwide availability

BIOPAQ®IC

Characteristics of the BIOPAQ®IC

- Suitable for urban environments
- Meeting stringent and rural site conditions
- Vertical tank, wide range reactor sizes
- Reliable, self-regulating system, internal circulation system
- 2-stage separator design
- Minimised neutralisation costs
- Consistent effluent qualities
- Compact reactor

- Robust system
- Handling high loading variations
- Fast, accelerated start-up

BIOPAQ®IC, how it works

- 1 Industrial wastewater enters the reactor and is mixed with the granular anaerobic biomass in the distribution system
- 2 Organic components are converted into methane (biogas)
- 3 Biogas is collected in the lower phase separator, generating a 'gas lift'
- Together with biogas, liquid flows upwards in the riser
- **5** Gas leaves the reactor in the liquid/gas separator
- Water returns through the downer into the distribution system. Hence the name:
 Internal Circulation
- 7 The effluent is polished in the second, upper compartment
- The biogas from the second compartment is collected in the upper phase separator
- 9 Effluent exits the reactor
- 10 Biogas leaves the reactor

Paques: leading in biological wastewater and gas treatment

Paques has over 30 years experience in helping industries and municipalities to reduce their water and carbon footprints and reclaim valuable resources. The cost-effective effluent purification systems produce energy from wastewater, whilst purifying the water and facilitating water reuse.

Since 1980, Paques realised more than 1800 references worldwide. Besides the headquarters in The Netherlands, Paques has subsidiaries and/ or production locations in China, Brazil, North America and India. In many other countries, the company is represented by licensed partners. This ensures local presence and the best service for clients worldwide.
